DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I (claims 30-40) drawn to conductive structure is acknowledged for prosecution in the subject application. Applicant has the right to file a divisional application covering the subject matter of the non-elected claims.

Oath/Declaration

2. The oath declaration filed on October 25, 2001 is acceptable.

Information Disclosure Statement

3. The office acknowledges receipt of the following items from the applicant:

Information Disclosure Statement (IDS) filed on February 15, 2002.

Specification

4. The specification has been checked to the extent necessary to determine the presence of all possible minor errors. However, the applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2818

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 30-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakabayashi (U.S. Patent No. 6,337,238 B1).

Nakabayashi discloses a conductive structure comprising at least a rough ruthenium layer, wherein a surface of the rough ruthenium layer or the rough ruthenium oxide has a surface area greater than a surface area of a completely smooth surface [col. 14, lines 46-].

Nakabayashi discloses all the features of the claimed invention as discussed above, but does not disclose the surface of the rough ruthenium layer has a surface area greater than about 1.2 times a surface area of a completely smooth surface having a substantially identical shape as the surface of the rough ruthenium layer.

Using a ratio of the surface of the rough ruthenium layer has a surface area greater than about 1.2 times a surface area of a completely smooth surface having a substantially identical shape as the surface of the rough ruthenium layer is considered to be obvious in variation design, since the ratio between the rough surface and smooth surface of the ruthenium is well known in the art, thus would have been obvious to one skilled in the art to apply the appropriate ratio such

as 1, 2 times between a rough and smooth surface of the ruthenium for a purpose of increasing the surface of the lower electrode.
